

# **Meducate Paediatric First Aid Blended Learning Guidance**

## **Notes**

Thank you for your interest in our Meducate Paediatric First Aid Blended Learning Course. Blended learning is used to provide more flexibility for both learners, clients and training providers.

Blended learning works by providing some of the training via online or distance learning and the remainder of the training in the traditional classroom environment.

### **Who is Blended Learning for?**

Blended Learning is available for our own branded Paediatric First Aid Course.

### **How long does it work?**

You book the online training course and then circulate the link to our website portal to your delegates.

Once they have successfully completed the course then you book them onto one of our classroom courses in Colchester where they complete 1 day of practical training and assessment.

### **How do you benefit?**

You can save money and time by only having to send learners out of work on 1 day instead of 2. They can complete the online element of the course at a time convenient for both employer and employee.

Learners also benefit from access to different learning styles not always available in a classroom environment.

The overall cost of your course is cheaper as we only have to open up our training room for 1 day rather than 2.

### **What if I have more than one student?**

We would be delighted to hear from companies and organisations needing this training for larger numbers of staff. Ask us about our bulk purchasing deals by phoning 01206 638711 or emailing [office@meducatetraining.co.uk](mailto:office@meducatetraining.co.uk)
